

Problem Solving Case Study Group Tool

Develop a case study for you to use in your yarning circle facilitation by:

1. Defining the problem

When does the problem usually happen?
When is it likely to happen?

Who is involved? Who else is usually there?

What usually happens? What is likely to happen?

What do you usually think and feel about this when it has happened?

2. Listing all the things you could do:

Group brainstorm.

Talk about everything that could be used as a possible strategy.

Think about the strategies discussed. Who would they work for? How likely is it to work? How prepared are people to give it a try? What are the good points? What are the possible risks?
